

## OKY2313

**Product Name:** NEW Azteeg RepRap 3D Printer Controller Board  
Compatible For Sanguino

**Product Module:** OKY2313

### Product Description:

1. The Azteeg 3DP is an open source controller designed to be used in 3D Printers and similar cartesian based machines including CNCs. It has all the features needed to run all current and future single extruder designs.
2. The Azteeg is based on Sanguino/Sanguinololu and is compatible with most based firmware. It is pin to pin compatible with the Sanguinololu with the addition of a FAN PIN. The Azteeg features mostly SMT parts to ease production and reduce cost.
3. Compatible with stepper motor drivers with the ability to use an external power source for the motors with higher voltages. The Azteeg 3DP is your low cost, compact and expandable 3DP printer controller. Fully Assembled except for the white connectors where you have a choice between right angle and vertical orientation. Soldering iron required.
