

## OKY3133

**Product Name:** Analog Sound Module Sound Sensor MIC  
Microphone Sensitivity Voice Module for Arduino

**Product Module:** OKY3133

### Product Description:

1. Sound sensor analog output.
2. Can detect the size of the sound.
3. Gain adjustable, stable performance Working voltage 5 v, analog output.
4. Extension board can easily connect the arduino sensors.
5. Equipped with a fixed bolt hole, convenient installation.
6. Through the analog ports can complete experiment Characteristics.
7. Working voltage 5 v.
8. Analog voltage signal output, signal amplitude  $VCC / 2$ .
9. Good sensitivity, built-in amplifier circuit, the adjustable gain.
10. Intensity can be obtained by the AD conversion of voltage signal.
11. Applicable to the arduino platform, compatible with the arduino sensor interface.

### Package Included

Packing List	Qty
Microphone Sensitivity Voice Module	1
