

## OKY3275

**Product Name:**Infrared Sensor IR Receiver Module Board VS1838  
Remote IR Sensor For Arduino

**Product Module:** OKY3275

### Product Description:

- 1.Can receive standard 38KHz remote control signals by means of programming can decode the remote control signals.
- 2.Strong ability to resist electromagnetic interference and light.
- 3.Widely used in stereo, TV, set-top boxes, digital photo frame, car stereo, remote control toys, satellite receivers, hard disk players, air conditioner, heater, electric fan, lighting and other home appliances.
- 4.With mounting holes easy to combine and install.
- 5.Make an universal remote controller with yourself.
- 6.Size: 2.8 x 2.3 x 0.8 cm/ 1.1 \* 0.9 \* 0.3".
- 7.Color: Red.
- 8.Output signal can be directly connected to microcontroller IO port.
- 9.Applications: For wireless remote control test.

### Package Included

Packing List	Qty
Infrared Sensor	1
