

OKY3457

**Product Name:GY-30 BH1750 BH1750FVI Light Intensity Sensor
Digital Light Sensor Module**

Product Module: OKY3457

Product Description:

- 1.Power supply:3v-5v.
- 2.Illumination range :0-65535 lx.
- 3.The sensor built 16bitAD converter.
- 4.Direct digital output, complex calculation is omitted, omitting calibration.
- 5.Does not distinguish between ambient light.
- 6.Close to the visual sensitivity of the spectral characteristics.
- 7.1 lux high-precision measurement of a wide range of brightness.
- 8.The standard IIC communication protocol.
- 9.Built-in communication converter to connect directly to microcontroller io interface.
